Semester Project 2

Silje Heldal Monsen

Design

What went well on the project :

I used my last three days on the design. I had struggled so bad with getting my images to work and got help the last week. When the images came through to the page a immediately started to work on my CSS, but I skipped the SCSS that would have taken me too much time.

What was difficult/didn't go well on the project :

It was very difficult to implement the logo. I only implemented it on the home page and then my menu just suddenly disappeared. I sadly didn't manage to get it back before delivery.

What would you do differently next time :

I honestly don't know. Next time I would have the knowledge to get my photos through faster to the page. I then have the opportunity to start the design part earlier.

Technical

What went well on the project :

I used 2 months on the javascript part. The first month everything was difficult. After that I started to understand more and things got easier. Every page to code took forever and I understood that I had to prioritise javascript if I actually wanted to learn it.

I think maybe my console logging and opening up my variables was what in the end went well on the project. I started to really understand why things didn't work and where it went wrong. I also am satisfied that I made my own way of logging in to the admin pages. I learned a lot by doing that.

What was difficult/didn't go well on the project :

Getting the pictures through to my page was definitely the most difficult part on the project and it delayed me starting to use SCSS. I choose to use my time on the javascript instead and write the CSS wich I already knew how to do. I also struggled with getting my event listener to work and I though that button onclick was an easier way to understand things. I sadly

didn't get enough time to make my cart button to work something that really makes me sad. It would have been so fun if I actually could almost purchase things on my page. I got stuck and there was too much things to fix before delivery.

What would you do differently next time :

Next time I would have the knowledge to do things faster. I should have implemented my logo a few days earlier so I could ask for help where to put it in my strap. Because I honestly don't know. I choose to put it on my home page, but I don't know if that was correct because then my menu stopped working. It works on all my other pages, but not the page where I put my logo.

I also think that next time I would have the time to write my SCSS and not only doing a quick fix and write everything in CSS to save some time.
